

Zhice Tang

Chongqing, China

Tel: (+86) 18123195393 (+1) 510-239-0496 | E-mail: townzcl@gmail.com tangzhice@berkeley.edu

EDUCATION

Chongqing University, Chongqing, China

Sep. 2023 - Jun. 2027 (Expected)

Bachelor of Artificial Intelligence, School of Big Data & Software Engineering

GPA: 3.52/4.0, **Rank:** 7/53

Relevant Coursework: Deep Learning (95), Statistical Analysis (96), Data Structures (93), Programming Techniques (96) NLP (96)

RESEARCH INTERESTS

Computer Vision /Multimodal Large Language Models /Image and Video Generation

RESEARCH EXPERIENCE

Project: “EEG foundation models”

June. 2026 - Now

Research Collaborator

- Developing scalable foundation-model pipelines across 500+ heterogeneous EEG datasets, including dataset discovery, metadata harmonization, deduplication, preprocessing, normalization, and cross-dataset evaluation.
- Investigating channel-aware tokenization and temporal-spatial representations for robust transfer across subjects, tasks, sampling rates, and electrode layouts.

Project: “Affinity-Guided Filtering for Image Matting without Alpha Labels”

March. 2026 - July. 2026

Research Collaborator Under Review at AAAI

- Co-authored an alpha-label-free semi-supervised matting framework that refines predictions with an Affinity-Guided Filtering Function (AGFF) and uses the refined outputs as pseudo-labels, with convergence analyzed via fixed-point theory.
- Validated the approach on AM-2K, P3M-10K, and LIDC, recovering fine transition details without additional inference-time computation.

Project: “LiftCut Tracker: AI-Powered Fitness and Fat-Loss Tracking Platform”

Mar. 2026 - Now

Project Developer

- Built a full-stack AI fitness and fat-loss tracking platform integrating training plans, workout logs, nutrition records, body metrics, onboarding, profile management, PDF export, and guest-to-account migration.
- Fine-tuned Qwen2.5-14B-Instruct with LoRA and built a structured-generation evaluation pipeline over 293 held-out cases, reaching 100% schema pass and 99.66% constraint pass.

Project: “GASP-SAM: Lightweight Geometry-Aware Semantic Prompting for Abdominal Organ Segmentation”

Dec. 2024 - May. 2025

Project Leader Accepted at ICONIP

- Proposed a parameter-efficient SAM ViT-B adaptation combining LoRA, BioMedCLIP semantic prompting, geometry-guided residual fusion, and local boundary refinement.
- Achieved 90.86% mean Dice on FLARE22 and 87.82% on Synapse with 8.10M trainable parameters; implemented the full PyTorch training and 3D evaluation pipeline.

SKILLS & HONORS

Programming: Python, C++ | **ML/AI:** PyTorch, TensorFlow/Keras, Hugging Face, OpenCV, LoRA, vLLM | **Tools:** Git, Flask

Honors: Chongqing University Second Prize Scholarship (2024); Third Prize Scholarship & Merit Student (2025); Berkeley Global Access (BGA) Scholarship, UC Berkeley (2026)
